

Production Operator

Leigh Cables are seeking an individual to work in a manufacturing environment, operating industrial machinery at various stages of electrical cable production.

The operator will be responsible for the safe manufacture of product to specification as well as monitoring the production process, responding to abnormal or out of specification situations and relaying problems to appropriate personnel.

Maintaining a high quality of product on schedule will be of primary importance.

The Leigh Cables production team work closely together to achieve results. A successful applicant is expected to communicate well with others and have good written and literacy standards. The operator will work with and support the production director and other members of the shift teams to promote effective working practices.

The operator will be responsible for looking after equipment and maintaining a high standard of workplace organisation. The operator will be expected to understand and follow all working rules and procedures to established standards whilst observing all safety and emergency procedures.

Training will be offered on various machines and may evolve over time to include other equipment and processes.

Experience

- Operating in a fast-paced environment to challenging deadlines
- Background in manufacturing
- Experience in Machine Operation
- Shift working experience

Skills

- Excellent oral and written communication skills
- Excellent organisational and planning skills
- Basic Computer Skills
- Ability to prioritise and multitask whilst retaining attention to detail and accuracy
- Self-motivated and flexible
